

SAFETY INSTRUMENTED SYSTEMS (SIS)

RSSI's Safety Instrumented Systems course and workshop is intended for engineers, operational personnel and others that are involved in the process of Safety Instrumented Systems classification, verification, and testing.

RSSI expert instructors will teach you the fundamentals of the safety lifecycle according to IEC-61511 and ISA-84.01. Learn to protect your personnel, equipment and the environment by reducing the likelihood of an identified risk. Our popular workshops will allow you to gain hands on experience you can apply when you return to your site.

Benefits

- Gain insight into regulatory requirements and best practices involving SIS's
- Practice running SIL verification calculations with industry leading software and the math behind it
- Return to your site with the skills and tools needed to classify, verify, and test your Safety Instrumented Functions

Prerequisites

- Familiarity with safety functions and hazard analysis

Logistics

- 2 Day Course | 8am – 5pm
- 1.4 CEUs
